SocioNeeds Index

The **2015 SocioNeeds Index**, created by [Healthy Communities Institute](#), is a measure of socioeconomic need that is correlated with poor health outcomes.

All zip codes, counties, and county equivalents in the United States are given an **Index Value** from 0 (low need) to 100 (high need). To help you find the areas of highest need in your community, the selected locations are **ranked** from 1 (low need) to 5 (high need) based on their Index Value.

Mind, Exercise, Nutrition...Do it! (MEND) Program

Description

Established in 2004, the Mind, Exercise, Nutrition... Do it! Program, also known as the MEND program, was created in order to educate different families and communities about the risks of obesity. The goal of MEND is to reduce global obesity levels by offering free healthy living programs through communities and allowing families to learn about weight management. The MEND program focuses on educating children at an early age about healthy living and providing parents with solutions on how to promote good habits at home.

The program works with various local organizations in communities and provides them with support, training, and equipment so people can make healthier choices. The program allows families to manage their weight "by addressing the three components necessary for individual-level behavioral change; (i) education (ii) skills training, and (iii) motivational enhancement." MEND helps educate entire communities about the importance of healthy habits and it costs less than treating the problem at an individual level.
