

# HOW TO RESPOND TO AN OPIOID OVERDOSE

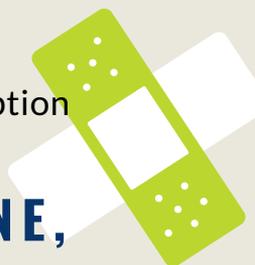

You *don't* have to be a medical professional to identify the signs or help, the important thing is to *act quickly*.

1

## CALL 911 IMMEDIATELY

All you have to say is "Someone is unresponsive and not breathing" and provide a clear address and/or description of your location.

2

## ADMINISTER NALOXONE, IF AVAILABLE

3

## TRY TO KEEP THE PERSON AWAKE AND BREATHING, PERFORM RESCUE BREATHING IF NEEDED

4

## PUT THE PERSON ON THEIR SIDE IN A RECOVERY POSITION

5

## STAY WITH THEM UNTIL EMERGENCY WORKERS ARRIVE
